A Clear, Easy, Honest Way to
Build Supplements

What You Can Do in the Lab

Mix, Match, and Make It Yours

This project is all about giving people the freedom to create their own mushroom supplements. Instead of buying a generic blend that may or may not fit their need

- Users choose from a variety of high-quality mushrooms.
- The lab helps people understand what each mushroom does instead of guessing.
- They combine selected mushrooms to create a personalized supplement.
- Reinforces transparency by letting users understand each mushroom before mixing.
- A clean, high-quality blend is prepared automatically.
- The final product includes clear labeling and simple usage instructions.

Why personalisation Matters

Built for Real People, Not One-Size-Fits-All

The process starts with picking your need and defining goals like focus, calm, energy, or immunity.

The system handles the technical steps: selecting strains and balancing amounts.

How do you want to feel today?

Choose the intention that feels right in this moment.

Focus

Calm

Immunity

Glow

Energy

Sleep

What Makes This Lab Special

A Clear, Easy, Honest Way to Build Supplements

- Everything is designed to be simple and transparent.
- Users can always see what's in their blend so no secrets, no hidden ingredients.
- Each mushroom's role and purpose is easy to understand.
- The interface removes the usual complexity of supplements.
- It builds trust by showing clear dosages and real information.
- The whole experience is designed to help people feel informed, comfortable, and in control of what they put into their bodies.

Your Mushroom Match

Lions mane

Brain function
Memory and focus
Mood + nerve health
Better to use in the morning

Reishi

Stress relief
Immune balance
Better sleep and recovery
Better to use in the evening

You get a mind + body synergy

Calmer mind
Sharper thinking
Stronger immune support
Better daily energy and sleep rhythm
Better to use in the morning for more productivity

Who benefits most from this combo?

Students or professionals needing focus
People dealing with stress or burnout
Anyone looking to support long-term brain health
Those building a daily wellness routine

How the Project Started & The Vision Ahead

This idea was sparked while working with a client. It was so innovative that I wanted to take it further and make it bigger.

- Initially built while working with a client in the supplement space.
- Saw the potential & decided to expand it beyond a single brand.
- Began designing the mushroom lab platform a place to mix, learn, and create blends.
- The goal is to scale it into a larger ecosystem for custom wellness products.
- A concept that can grow into B2B partnerships, product white-labeling, or consumer-direct platforms.

Research

understanding the
current situation

I collected a broad set of questions, user needs, and context from different people. That tells me your scope wasn't just "what do we want to build," but "what problem do people actually have, how do they work now"

User Interviews

Interview Question Framework

Competitor & Market Scan

Brand and Visual Benchmarking

Influencer & Trend Analysis

Insight Clustering & Mapping

Market & Competitor Review

- Examined existing brands, services and visual identities relevant to our domain.
- Analyzed their positioning, tone, and user appeal.
- Mapped strengths and weaknesses to define differentiation opportunities.

Insight Clustering & Synthesis

- Organized all findings (users, market, visuals) into clusters/themes using mapping tools in Figma.
- Distinguished between user needs, market gaps, and brand opportunities.
- Created a structured, insight-driven base for strategy development rather than an unstructured pile of notes.

Exploratory Interviews

- Conducted multiple structured and semi-structured interviews with potential users
- Captured objectives, challenges, emotional drivers, and behaviors
- Built a reliable qualitative foundation for defining user needs

Discovery Question Framework

- Designed a consistent interview questionnaire to ensure uniform data collection.
- Allowed cross-comparison and identification of recurring themes across different respondents.
- Increased validity and reduced bias in user data collection.

Brand & Visual Benchmarking

- Collected visual references, mood boards, identity systems, and design inspirations.
- Evaluated color palettes, visual language, and emotional resonance.
- Used findings to inform brand-style suggestions and design direction grounded in evidence.

Why This Research Phase Matters

Evidence-based decision-making

Every strategic and creative decision builds on real human data rather than guesses.

Reduced assumptions & risk

We avoid biased decisions, ensuring relevance and better acceptance by users.

Clear differentiation

By mapping competitors and visual trends consciously, we position the solution to stand out meaningfully.

Emotional resonance

Understanding both functional needs & underlying motivations helps in building brand identity that connects.

Strategic clarity & alignment

This lays a transparent foundation stakeholders can trace why we made certain choices.

Growing Demand for Personalized Supplements

- Saw the growing demand for functional mushrooms and personalized wellness.
- Noticed that supplement companies mostly offer fixed blends no customization.
- Developed the concept of custom mushroom formulation, tailored to user goals.
- Creates new business opportunities: personalization, premium product lines, and consumer trust.
- Helps companies stand out in a competitive supplement market.

Who Benefits from Custom Mushroom Blends?

Health-conscious individuals looking for natural supplements (focus, immunity, stress relief).

Professionals needing mental clarity or stress management (e.g. remote workers, students).

Wellness-oriented customers skeptical of “one-size-fits-all” supplements.

Supplement companies wanting to offer premium, customizable products without building everything from scratch.

How the Mushroom Lab Could Be Implemented

White-label or private-label option for supplement companies.

Subscription or one-time purchase models.

Option to expand with additional strains, formats (capsules, tinctures), or add-ons.

Direct-to-consumer platform:
customers build blends
online → we produce & ship.
